Subject: Re: Jordan Downs Cleanup

Amy,

I just proposed a number of measures to Ana at DTSC to solve this compliance issue. I would like to include you on this.

- Remove all the stockpiles and prohibit the future stockpiling of the material.
- Prevent track out by installing a tire wash rack.
- Place banners on the fences with a phone number to call to report emission exceedances, the calls could go to AQMD or one of the EPA inspectors.
- Require CEMS around the site, either plates, cameras, or ones similar to what is already at Exide
- Limit the drop heights of the front loaders when loading trucks.
- Require more water be used for dust mitigation.
- Reduce the existing wind speed requirements.
- Workers should be in TYVEX and, when appropriate, use respirators.

Thanks for the help!
